

Lego productivity game:

Group One:

Your company has decided to invest in the building of a new landmark hotel in the capital city of Vlachograd in Georgistan.

Georgistan has long been renowned for its capital stock investment and, as a result, you have all of the many resources that see you in front of you. Your job is to build the biggest structure possible using the resources at hand within a 10 minute period. The only stipulation from your boss is that he wants a big marble globe to adorn the top of the structure and therefore your building must be built solidly so as to hold the globe on the top soundly. There will be an earthquake test at the end of the time period to test whether this has been achieved. Other than that, there are no limitations. The Governor of Vlachograd is proud to have you here and wants to make life as easy as possible for you. He is giving you a vastly experienced Senior Engineer to train your staff and has also enclosed a blue-print of your building, which has been created by the worldly scientists at the Vlachograd R&D Lab on the outskirts of the city. You would do well to take a look at these.

Building begins in 5 minutes ...

Group Two:

Your company has decided to invest in the building of a new landmark hotel in the capital city of Harristown in Simonland.

Simonland has never really been associated with capital stock investment and, as a result, you have only the resources that you see in front of you. Your job is to build the biggest structure possible using the resources at hand within a 10 minute period. The only stipulation from your boss is that he wants a big marble globe to adorn the top of the structure and therefore your building must be built solidly so as to hold the globe at the top soundly. There will be an earthquake test at the end of the time period to test whether this has been achieved. The Governor of Harristown also has some limitations. They are as follows:

1. Workers must be given a 1 minute break from building after every 8mins of work.
2. There should be no blue bricks used beyond a height of 3cm. Planes will confuse it with the sky.
3. Green bricks and red bricks are not allowed to touch. It is downright unsightly.
