

Diamond 9

Serious adverse reactions to vaccines are extremely rare but they do happen.

Vaccines are 90-99% effective in preventing diseases.

Some people have religious beliefs which prevent vaccination.

Vaccines protect the herd.

Vaccines contain toxic chemicals, but in small, safe amounts.

Vaccines are tested thoroughly before use.

Pharmaceutical companies and the WHO as well as other independent studies say vaccines are safe.

There are lots of stories on the internet from people who are convinced vaccines caused autism in their children.

Before the rubella vaccine was introduced in 1969 Rubella caused the death of 11,000 babies and birth defects in over 20,000 in the US alone.
