

Box and Point of Sale.

This box has been manufactured in a different way to normal. The box has been designed using 2D Design and has been cut out with some graphics engraved and cut out into the box in coloured green card. The coloured graphics have then been printed onto label paper and cut out using a Craft Robo cutter. They are stuck onto the box where the marks are from the engraving.

The box has a custom made plastic insert to stop bottles moving around inside the packaging.

This is also laser cut and line bent using a strip heater in polystyrene plastic. The box is self locking so no glue is required to hold it together.
